

**Test 6 – Administration I - Oracle 10g**

**Question 1** : From where are dynamic performance views populated? (Choose all correct answers.)

- A. The instance
- B. The controlfile
- C. The data dictionary
- D. The Automatic Workload Repository

**Question 2** : When you shut down an instance, what happens to the information in the dynamic performance views? (Choose the best answer.)

- A. It is lost.
- B. It is saved to the Automatic Workload Repository by the MMON process.
- C. It is saved to the controlfile.
- D. It depends on the method of shutdown: a crash or SHUTDOWN ABORT will lose it; otherwise, it will be saved.

**Question 3** : Which of the following memory structures are required, rather than optional, parts of the SGA? (Choose three answers.)

- A. Database buffer cache
- B. Java pool
- C. Large pool
- D. Redo log buffer
- E. Shared pool
- F. Streams pool

**Question 4** : You are creating a database. Put these steps in the correct sequence:

- A. Build the data dictionary.
- B. Create a parameter file.
- C. Create the data dictionary views.
- D. Issue the CREATE DATABASE command.
- E. Issue the STARTUP NOMOUNT command.

**Question 5** : If you do not specify a SYSAUX datafile on your CREATE DATABASE command, what will happen? (Choose the best answer.)

- A. The command will fail because SYSAUX is a required tablespace.
- B. The command will succeed, but you must add a SYSAUX tablespace after database creation.
- C. The command will succeed, and a default SYSAUX tablespace will be created for you.
- D. The command will succeed, but the whole data dictionary will be in the SYSTEM tablespace.

**Question 6 :** Which of the following can never be changed after database creation?  
(Choose the best answer.)

- A. Database block size
- B. Database character set
- C. Database name
- D. None of the above: nothing is fixed at database creation time

**Question 7 :** Which of the following is required to create a database? (Choose the best answer.)

- A. The operating system's root (for Unix/Linux) or Administrator (for Windows) password
- B. Execute permission on the DBCA
- C. At least as much RAM as the size of the SGA
- D. None of the above

**Question 8 :**

Which of the following files are optional? (Choose three answers.)

- A. Online redo log files
- B. Parameter file
- C. Password file
- D. SYSAUX tablespace datafile
- E. SYSTEM tablespace datafile
- F. UNDO tablespace datafile

**Question 9 :** When does the data dictionary get created? (Choose the best answer.)

- A. When you create a database
- B. When you run the post-creation scripts catalog.sql and catproc.sql, called by CreateDBcatalog.sql
- C. When the SYSTEM and SYSAUX tablespaces are created
- D. It does not need to be created; it is always available as part of the instance

**Question 10 :** Which of the following processes are optional? (Choose three answers.)

- A. Archive process
- B. Checkpoint process
- C. Database listener
- D. Grid Control Management Agent
- E. Log writer
- F. Process monitor
